Assignment

I have implemented the following things.

- Client-side validation (HTML5)
- Server-side validation (Fluent API)
- Dependency Injection (Ninject)
- AutoMapper
- Repository Pattern
- Unit Of Work

Code Review Pages

Client-side

- Views => Index.cshtml
- Controller => HomeController.cs

Javascript

- Script => App => `PersonService, PersonController`

Models

- Models => Person.cs

View Models

- ViewModel => PersonViewModel.cs

Data Access Layer

- Data => IPersonRepository, PersonRepository, IUnitOfWork, UnitOfWork

Business Logic

- BusinessLogic => IPersonBusinessLogic, PersonBusinessLogic
